

BCA Blockchain Contract Audit

區塊鏈合約檢測服務

Project: SCROOGEWEALTH Token

Report date: Jul 7th, 2023

- ✓ Re-entrancy
- ✓ Overflow/underflow
- ✓ Use of block.timestamp
- ✓ Use of tx.origin
- ✓ Use of selfdestruct
- ✓ Storage conflict
- ✓ Force receive token
- ✓ Using inline assembly
- ✓ Access vulnerability
- ✓ Return value of low level call
- ✓ Return value of transfer
- ✓ Enable Trade

Audit Status: PASS

Vulnerabilities list	p.02
-----------------------------	------

Summary	p.04
----------------	------

Vulnerabilities Check	p.06
------------------------------	------

Conclusion	p.12
-------------------	------

Disclaimer	p.13
-------------------	------

Project name	SCROOGEWEALTH Token
Network	BSC
Language	Solidity
Delivery Date	2023/7
Contract Address	0xa48445f061e8d6bBa7d960F60258b678Da061917

This report only covers a check of common vulnerabilities mentioned in the above list. Many critical vulnerabilities or malicious backdoors may not be detected. To undertake a more comprehensive inspection, we recommend upgrading to our full-service version.

	Token Information
Fee	Yes
Fee Privilege	None
Ownership	None
Max Tx Amount	None
Blacklist	None
Decimals	0
Max Supply	2100000000000000
Mint/Burn	None/Yes

Re-entrancy

If a contract has this vulnerability, when it calls an external contract, and does not update its status before sending funds, an attacker could continually call the withdraw function to transfer funds until all funds in the contract are depleted.

PASS

Overflow/underflow

When performing calculations on numbers, if the result exceeds or falls below the range of the type, an Overflow or Underflow vulnerability can occur.

PASS

Dependence on `block.timestamp`

Generating random numbers using global variables like `timestamp` can be predicted by attackers.

NONE

Use of `tx.origin`

When a contract uses `tx.origin` to verify user identity, malicious actors can exploit this vulnerability, masquerading as an address that can pass verification.

NONE

Use of selfdestruct

When a contract improperly uses the selfdestruct function, it can result in the contract being destroyed and its balance transferred to an address controlled by the attacker.

NONE

Storage conflict

If different variables share the same storage slot, it can lead to variables being maliciously altered by attacker.

PASS

Force receive token

If the balance of the contract is used as a check condition, the contract may become invalid if an attacker forces a transfer.

PASS

Using inline assembly

The use of assembly is error-prone and should be avoided.

NONE

Access vulnerability

Vulnerabilities in permissions may allow malicious actors to bypass identity checks for accessing functions, or to change the owner of the permissions.

NONE

Return value of low level call

This vulnerability refers to an issue where, during the execution of `call()`, a return value is typically given to indicate whether the function was successful or not. If this return value is not properly used, unexpected errors may occur.

NONE

Return value of transfer

This vulnerability refers to an issue where, during the execution of `transfer()`, a return value is typically given to indicate whether the transfer was successful or not. If this return value is not properly used, unexpected errors may occur.

NONE

Enable Trade

If the contract includes the "Enable Trade" feature, the project party has the right to disable users' token trading privileges. The users' assets will be at risk.

NONE

Conclusion

This is an implementation of the ERC20 token standard that has been audited and found to have no vulnerabilities from the list. A 7% transaction tax will be transferred to the "trade" address specified by the deployer, and the function `balanceOfBurn()` is used to check the amount of tokens owned by "trade". If the transfer amount is less than 100, the fee cannot be deducted. Investors are advised to take note.

Disclaimer

Before you use this website to fill in basic information, upload information and apply to this service, you have to read this Terms of Service on the website thoroughly to protect your right.

We only audit common hacking issues in the above smart contracts, and do not guarantee the business model of this project. Investment involves risks, please consider carefully before purchasing.
